regards.

Tendency towards Regional Concentration

Industry Group Concentration Ratio (IGC), provides a picture of the relative importance of a particular Industry Group, in a regional setting. The movement of C8, as against C4, over the 9 year period has great significance. It implies that, progressive addition to the stock of MSMEs in Tamil Nadu, also show a tendency of getting concentrated in eight districts of the State. This also implies that, 69% of all MSME units registered, are concentrated in these districts. An analysis of the pattern of concentration in the remaining 24 districts, indicate that, on an average, they contribute only 1 % of the total number of units.
